Face race modulates inhibitory efficiency

Viola Benedetti
Ph.D. student
Cognitive Psychophysiology Lab
University of Florence (IT)

Face race processing

Race is an information that we quickly extrapolate from **faces**

Other-Race Categorization Advantage (ORCA)

OTHER-RACE (OR)

SAME-RACE (SR)

Study aim

- Little is known about its interaction with **inhibitory control**
- Executive function that allow us to stop in response to external signals

Can face race modulate inhibitory efficiency?

Methods

- **Participants:** 30 Western Caucasian observers
- **Paradigm:** Go/No-Go Task → inhibitory
- **Face stimuli:** 10 Asian (EA) and 10 Caucasian (WC) faces
- **EEG registration:** 128 ch

No-Go = Other-Race

✓ **Categorization**
Better inhibition?

No-Go = Same-Race

⚡ **Categorization**
Worse inhibition?

Behavioural results

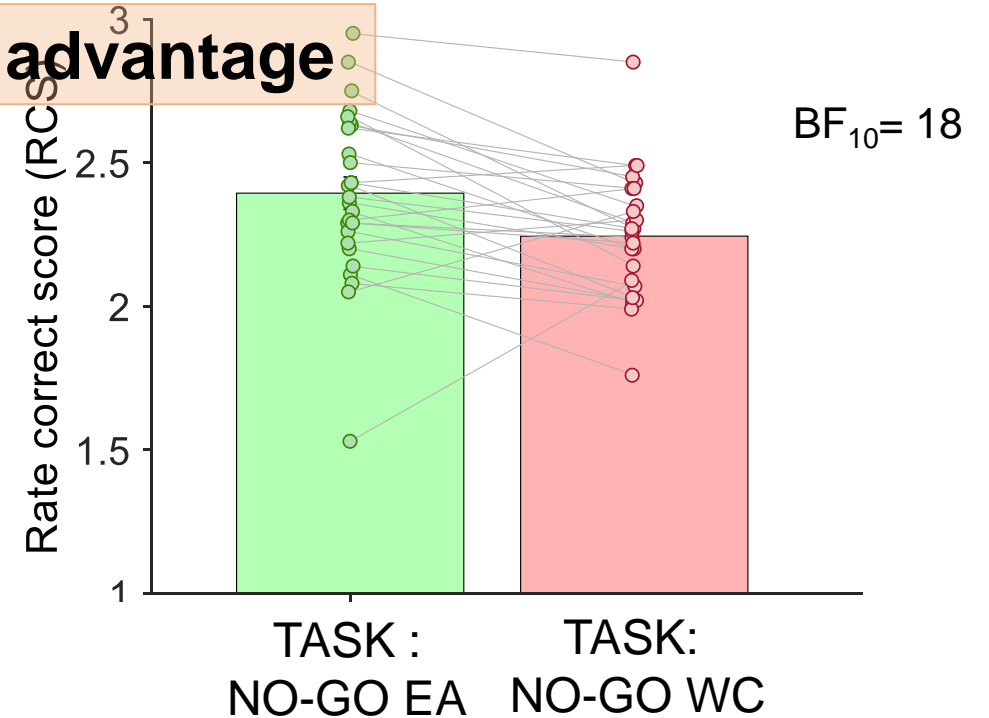

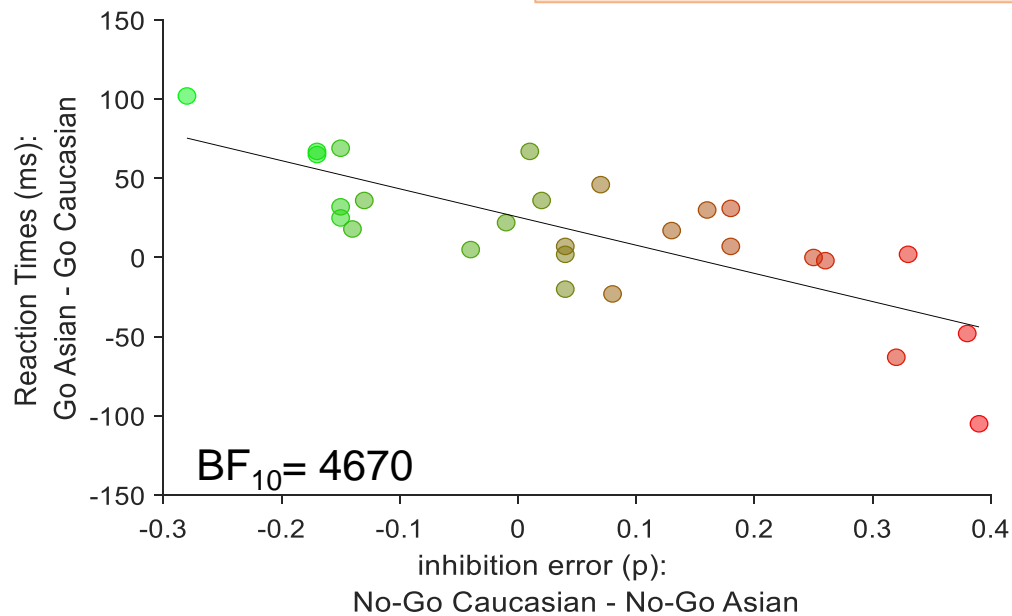

Speed-accuracy trade-off

Overall cognitive cost:
the Rate Correct Score (RCS)

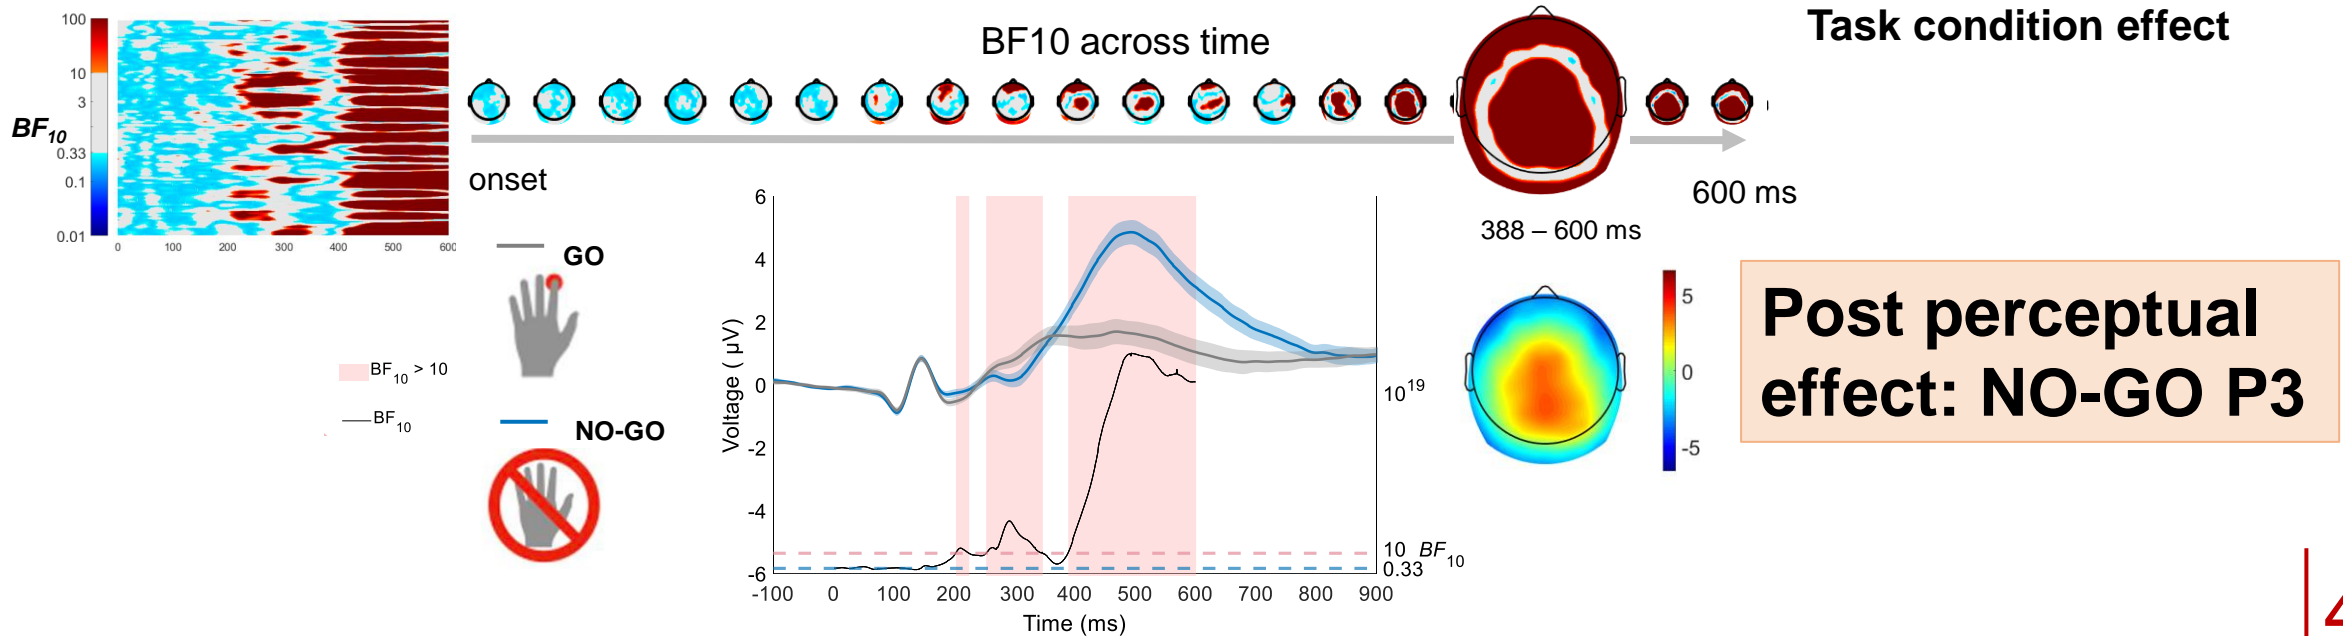

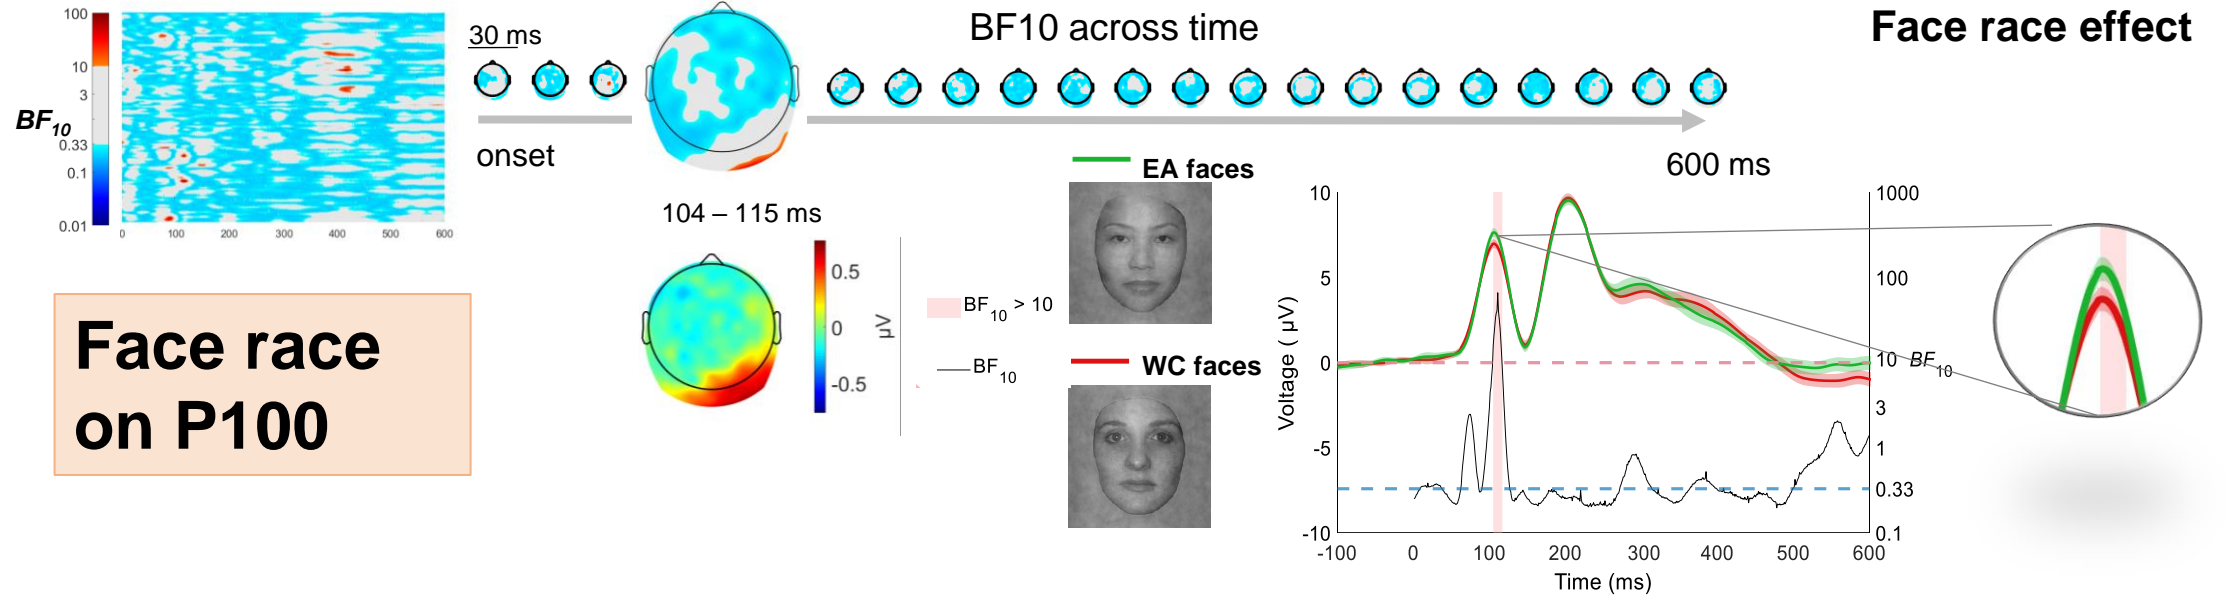

Same-race faces

< errors
> RTs
Other-race inhibitory advantage

EEG Results

EEG Results

Interaction between face race & task condition

NO-GO comparison

Face race effect on the NO-GO P3

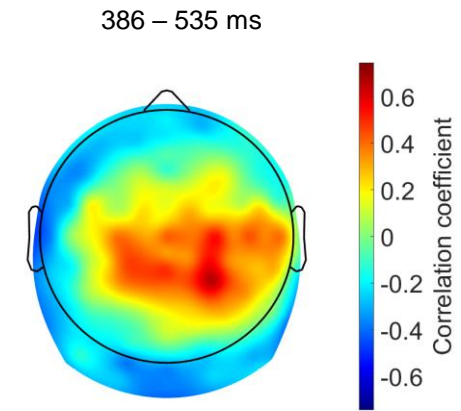

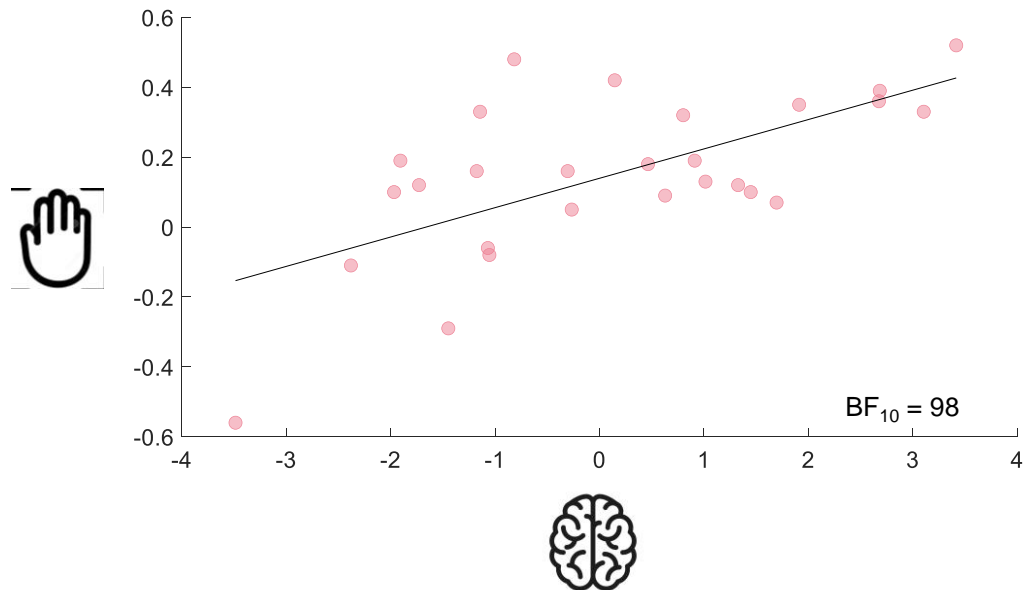

correlation
Race effect magnitude

{  = Δ RCS (EA - WC)

{  = Δ NO-GO voltage (EA - WC)

Behaviour consistent with neural response

Sum-up and conclusions

Other-Race Inhibition Advantage

- Early perceptual electrophysiological differences between races
- Difference in the response inhibition component between races

P100

NO-GO P3

- **Face race modulates response inhibition**
- **Cross-cultural? We'll see.**

Study: Conclusion

Interpretation and final remarks

A) Main effect: ACCURACY

Regardless of the ethnicity of the faces, the LPP differs between correctly inhibited responses and inhibition errors. This finding corroborate literature on the topic.

Condition difference (350 – 450 ms)

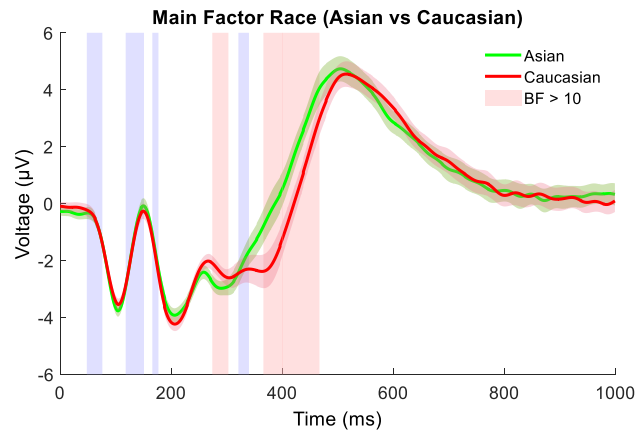

Voltage Inhibited minus errors

A) Main effect: RACE

the LPP differs between correctly inhibited responses and inhibition errors. This finding corroborate literature on the topic.

Condition difference (350 – 450 ms)

Voltage Asian minus Caucasian

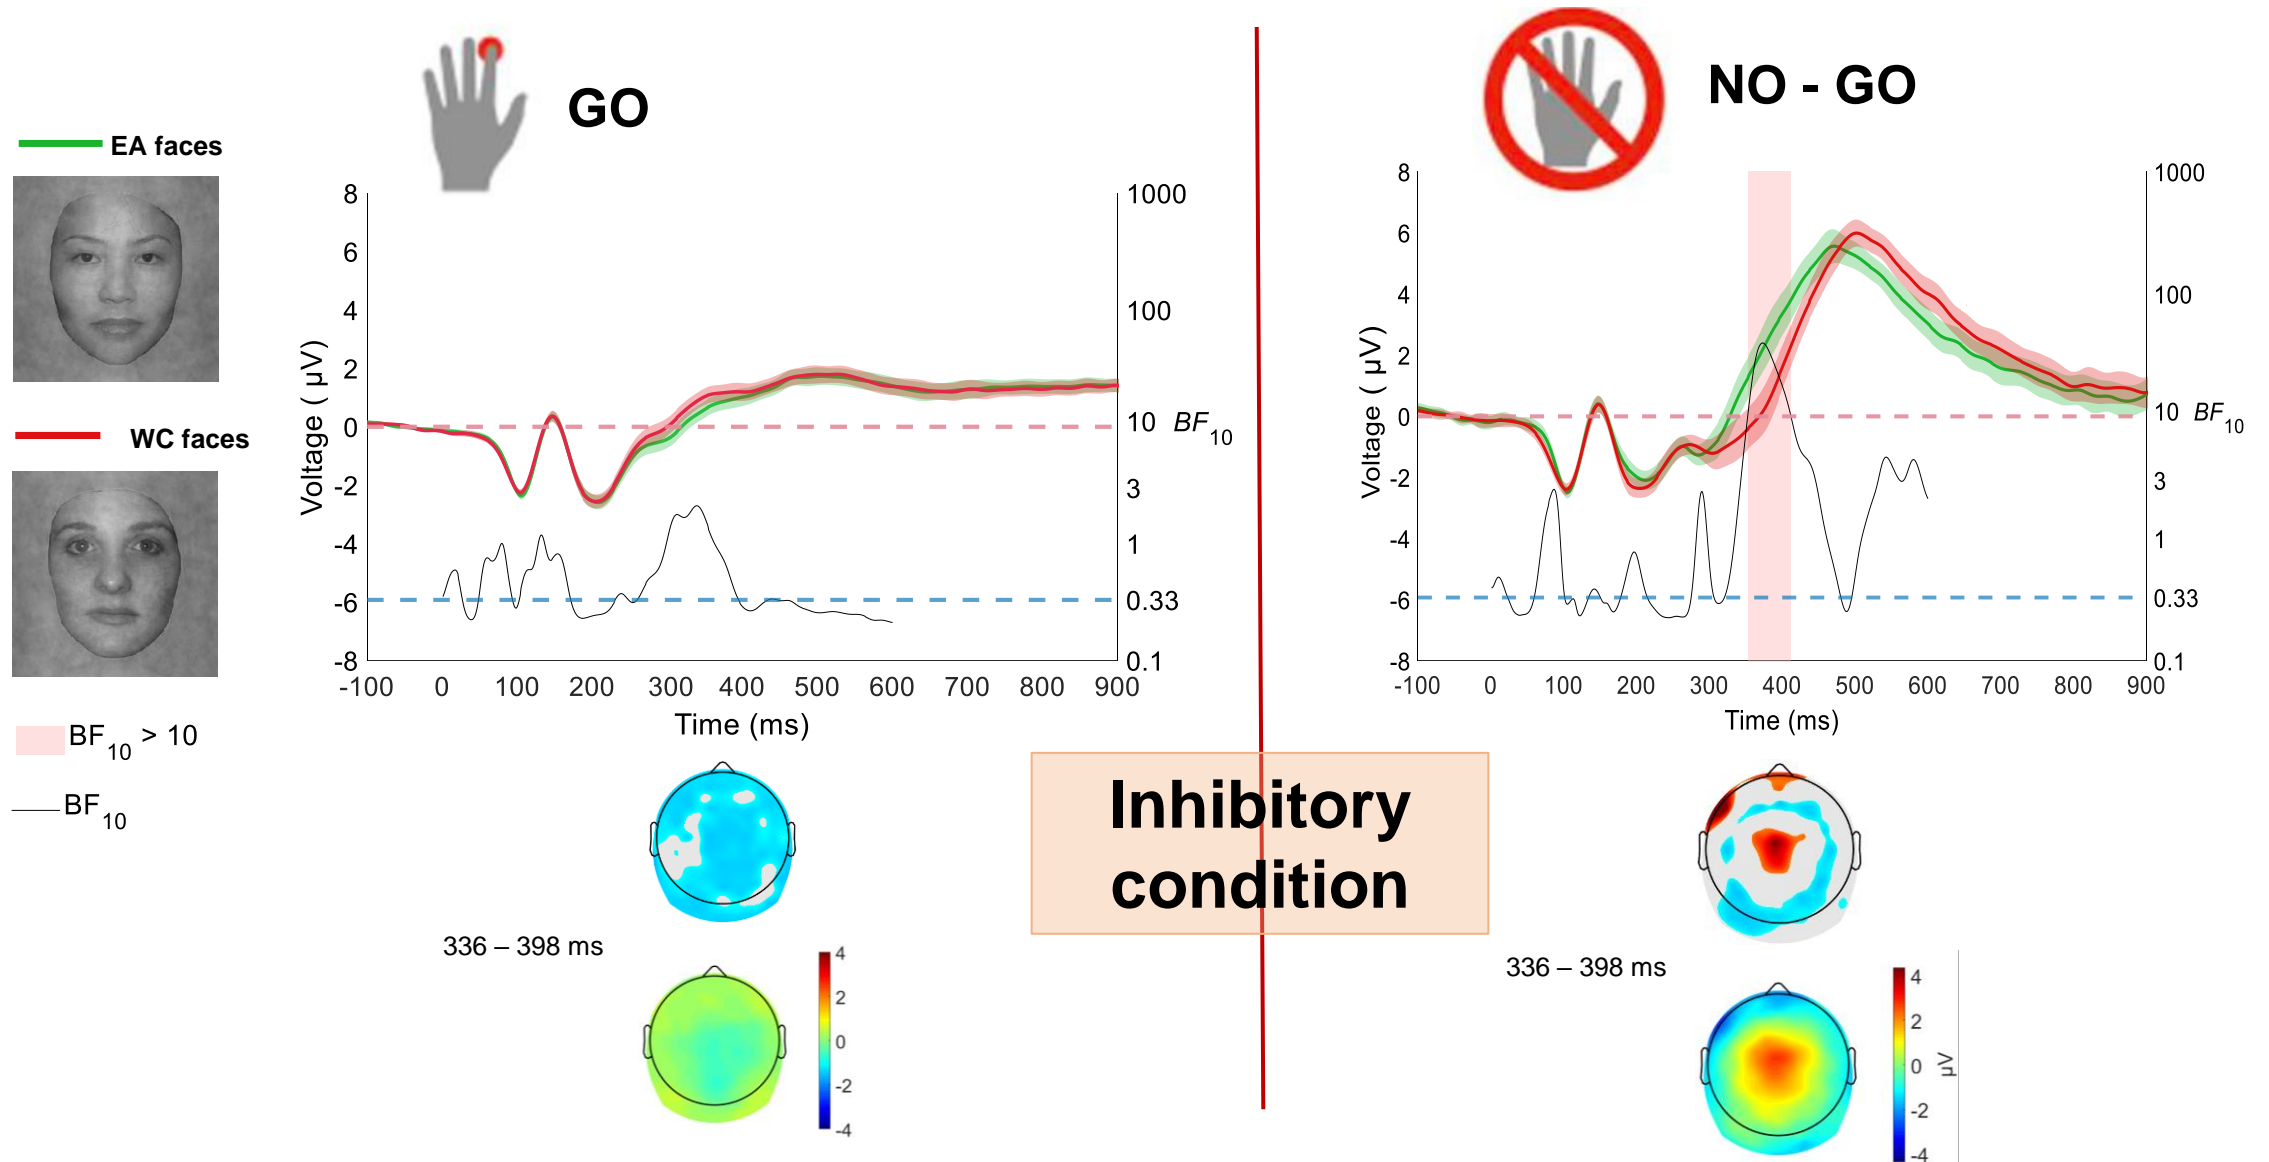

Inhibition and Face-Race: **other-race effects**
